Pathway BioLogic University a Success Making Sense of the Unknown

November 5, 2018 – Plant City, FL: Class was in session as Pathway BioLogic provided a full day of education for one of their key partners. PBU – Pathway Biologic University – provides clients with a more in depth understanding of how microbial products are produced and the value they bring to their portfolios. PBU focus areas include Microbial Discovery / Bio-prospecting, Fermentation, Formulation and Greenhouse / Screening.

Pathway BioLogic's research & development team is highly qualified in the areas of microbiology, bio-chemistry, biotechnology, plant pathology, and agronomy. PBU is tailored to fit training for our clients; it provides the basic microbiology behind how our products work, with emphasis on our clients specific applications.

"Pathway is committed to the success of our partners," says Michael Gans, Chief Operating Officer of Pathway BioLogic. "A platform like PBU helps them to better understand the science behind our products and provides a comfort level when speaking to it in the field."

About Pathway Biologic: Pathway Biologic is an applied microbial science company and emerging leader in the rapidly growing field of microbial products with services and solutions that are technology independent. We develop superior microbial solutions for optimized plant growth, nutrient use efficiency, and animal health that provide exceptional performance and ROI. Pathway BioLogic is committed to providing the innovations that will help sustain crops around the world.
